

New Benefits are Coming to CAI's Products

ToolBox is here to reduce expensive down-time

The TMT TranslatorTB is ideal for applications which combine J1587/J1708 engines with newer J1939 installations.

Features:

- Translates J1587/J1708 to J1939 or vice versa
- Ready to use without user configuration
- Supports a broad range of engine parameters and diagnostic trouble codes
- Built durable for the rigors of Marine, Automotive, Truck, Off-Road and transportation industries

New Value-Added Features—Now Standard

The TMT TranslatorTB now includes a built-in USB interface to aid installers, expedite installation, and minimize downtime— at no extra cost.

Scan the databus for a complete list of available devices and parameters

Diagnose communication problems

Browse historical log information including databus errors, trouble codes, and more

Upgrade the TranslatorTB in the field

Free, downloadable software is easy to use

* USB-B cable not included

CAI's products are sold internationally and can be found in some of the finest marine and transportation systems worldwide.
